MoEIS Update - Dave Freeman/MIS staff

MoEIS File Transfer Component of PAQ 30 Update:

- The APCP and the MoDNR/MIS programs have had several meetings and a project plan has been developed to implement the file transfer component of MoEIS.

Please note:

- Due to recent compatibility issues with the software that runs MoEIS and the DB2 server software the file transfer component project has been slightly delayed from the original time frame given to the program by MIS. MIS resources had to be diverted to address an issue with the on-line MoEIS system and the load of data being entered by facilities through out Missouri.

- The problem came from upgrades that were done to the DB2 servers within the last year that had an affect on the MoEIS system. This issue could not be detected from standard testing done by the APCP after these types of upgrades to the MoEIS system.
- Due to it being an issue with the number of facilities using it and the amount of data being entered or what we see as the **load** being put on the servers it took us by surprise somewhat.
- When updates are done to either MoEIS or the servers that house it, the APCP does test all affected components of the MoEIS system but the load was one that couldn't be addressed until the emission reporting period started.
- MIS worked diligently on this issue, with all software vendors involved, getting it resolved as soon as possible. The APCP appreciates their efforts.

Cooperation from facilities or local agencies will be needed.

- In order for this to be a successful project the APCP will require volunteer participants from the larger facilities and the local agencies who have the IT resources available to commit to working with the APCP and MIS on this project.

- We acknowledge and appreciate BASF, (Mr. William Henry), for volunteering their IT resources to work with MoDNR IT resources to establish the file transfer component for facilities.
- We acknowledge and appreciate the local agencies, especially St. Louis County, (Sue Ehrhardt), for volunteering to work with MoDNR staff to establish the file transfer component for the local agencies.

- Any other willing participant please contact:
